

Imagine: One Company Can Handle It All

Whether it's clean power, facilities maintenance, or modernization projects, look to ENGIE for the answers. We can finance, design, build, operate, maintain and manage your building systems and energy infrastructure projects. Tens of thousands of commercial and industrial, municipal and public organizations across approximately 1,000,000 sites – including some of the most transformational, large-scale projects in North America – have become more efficient, productive and sustainable as a result.

That one company is ENGIE.

Generation

On-site energy networks and microgrids for clean, reliable and flexible power generation delivered with utility grade expertise at local scale.

Impact

Data-driven insights to enable multi-site businesses to plan, manage and measure their energy, waste, water and telecom spend, usage and resources.

Supply

Retail natural gas, electricity and renewable supply for commercial and industrial customers in deregulated service territories throughout the United States.

Services

Facility-specific technical projects and programs that include design build MEP construction, energy efficiency and renewables, building maintenance, and facilities management services.

Access the expertise of our operating companies – one or all – to meet your financial, facility and sustainability goals.

Storage

Turnkey energy storage systems that reduce peak demand during high priced energy periods to lower costs.

NOTE: In Connecticut, suppliers may not market products as "renewable energy" unless the offer is supported by an ownership in or a PPA for a renewable resource used to serve the contract. RECs may originate only from ISO-NE, New York ISO, or PJM control areas and RECs may originate only from sources designed as Class 1.
